Anatomy and Embryology

Continuation of "Zeitschrift für Anatomie und Entwicklungsgeschichte"

This Journal publishes original articles on anatomy, histology and embryology of vertebrates and, especially, of man. In recent years, particular emphasis has been placed on embryological work and on studies contributing to our knowledge of the structure and development of the central nervous system. The publications are based on a wide range of methods reaching from macroscopical and light microscopical techniques to electron microscopy and stereology. - Great efforts are being made to achieve the highest possible standards in the printing of illustrative material and to publish concise contributions within a few months after submittance.

Subscription Information

Cell and Tissue Research

Continuation of "Zeitschrift für Zellforschung und mikroskopische Anatomie"

Cell and Tissue Research presents to its readers significant advances encompassing a broad field of cell biology and microscopical anatomy. The Journal deals with investigations on diverse organisms ranging from invertebrates to mammals, including man. Emphasis is placed on the comparative aspects in cell biology.

The following facets are given particular consideration: ultrastructure of cells and tissues; neurohistology; morphological neuroendocrinology; microanatomy of endocrine, reproductive, digestive, and lymphatic systems. These studies are based on a wide spectrum of modern methods.

The Editors and Publishers of this international Journal have set as their goal rapid processing of the manuscripts with the highest standards attainable for reproduction of the illustrative material.

Subscription Information

1981: Vols. 214-219 (3 issues each); DM 2.376,- plus postage and handling

Histo- chemistry

Histochemistry publishes original papers dealing with problems in all areas of cyto- and histochemistry. Special emphasis is placed on theory and methodology (including fractionation and homogenization techniques, autoradiography, polarization optics, fluorescence microscopy). Papers on applied cyto- and histochemistry which serve to illustrate methods are also welcome, as are those which help advance the understanding of molecular processes in the organism and the interrelationship of cells and their individual parts.

Subscription Information:

1981: Vols. 71-73 (4 issues each); DM 1.230,- plus postage and handling

Cell and Tissue Research

This journal was founded in 1924 as the *Zeitschrift für Zellen- und Gewebelehre*, from Vol. 2 (1925) it was published with the subtitle: *Continuation of the Schultze-Waldeyer-Hertwig Archiv für mikroskopische Anatomie. Zeitschrift für Zellforschung und mikroskopische Anatomie* (Vols. 1–20) (1934) as: *Zeitschrift für wissenschaftliche Biologie* (Abteilung B) edited by R. Goldschmidt, W. von Möllendorff, H. Bauer, J. Seiler. Vols. 2–28 (1938) edited by R. Goldschmidt and W. von Möllendorff. Vols. 29–33 (1944) as: *Zeitschrift für Zellforschung und mikroskopische Anatomie, Abteilung A, Allgemeine Zellforschung und mikroskopische Anatomie*, edited by W. von Möllendorff and J. Seiler, from Vol. 34 without the subtitle, *Abteilung A, Allgemeine Zellforschung und mikroskopische Anatomie*. From Vol. 34 (1949) edited by W. Bargmann, J. Seiler; from Vol. 53 (1960) edited by W. Bargmann, B. Scharer, J. Seiler; from Vol. 83 (1967) edited by W. Bargmann, D.S. Farner, A. Oksche, B. Scharer, J. Seiler; from Vol. 125 (1972) edited by W. Bargmann, D.S. Farner, F. Knowles, A. Oksche, B. Scharer. Beginning with Vol. 125 (1972) with the subtitle *Cell and Tissue Research* and beginning with Vol. 148 (1974) under the title *Cell and Tissue Research* and the subtitle *Continuation of Zeitschrift für Zellforschung und mikroskopische Anatomie*. Beginning with Vol. 164 (1975) edited by W. Bargmann, D.S. Farner, B. Lofts, A. Oksche, B. Scharer. Beginning with Vol. 166 (1976) in cooperation with: A. Björklund, R.A. Cloney, G. v. Ehrenstein, J. Flament-Durand, G. Goldspink, T. Hökfelt, D. Szöllösi, L. Vollrath. Beginning with Vol. 193 (1978) edited by D.S. Farner, B. Lofts, J.F. Morris (beginning with Vol. 221, 1981), A. Oksche (Coordinating Editor), B. Scharer, L. Vollrath, in cooperation with A. Björklund, R.A. Cloney, J. Flament-Durand, G. Goldspink, H.G. Hartwig, T. Hökfelt, N.T. James, H. Lehmann, J.P. Preface

In response to repeated requests for a reference work encompassing the contributions of the past decade, this General Index to Volumes 101 through 200 of *Cell and Tissue Research (Zeitschrift für Zellforschung)* has been assembled by the publishers and editors.

We dedicate this volume to the memory of Professor *Wolfgang Bargmann* with great affection and admiration. It is a document of his outstanding activities as Editor-in-Chief of the journal (1949–1978) during the last eight years of his life (Vols. 101–192).

Indices to Vols. 1–50 (1960) and 51–100 (1970) were prepared according to traditional bibliographic methods. Due to the extent of the published material in Vols. 101–200, a new method of handling these data had to be employed. The present reference volume was produced on the basis of the DIMDI (Cologne) system of titles and key words; we are greatly indebted to this institute for help and cooperation. After laborious preliminary sorting three (maximally five) key words were chosen by A.O. or L.V. from the computerized list of each respective paper. We ask the readers' indulgence for a number of compromises.

During this endeavor the editors were greatly aided by the publishers. We are most grateful to Mrs. G. Delis and Miss L. Fischer for their efficient management, to Mrs. U. Schmelzer for the preparation of the manuscript, and Mrs. U. Brunner for reading the galley proofs.

It is our sincere hope that the present index (1970–1979) will ease the bibliographic work of our readers and aid in promoting their research. Further indices will appear at shorter intervals.

The Brain of the Common Marmoset (*Callithrix jacchus*)

A Stereotaxic Atlas

1980. 5 figures, 3 tables, 73 plates.
V, 91 pages. Cloth DM 168,-; approx. US \$ 74.60.
ISBN 3-540-09782-1

Marmosets belong to the anthropoid or simian primates which include species closest to man. In contrast to other simians, the care and breeding of marmosets is relatively easy and their reproduction rate considerably higher. These characteristics make marmosets of great interest for primate research, especially as the supply of simians from the wild becomes increasingly limited.

This atlas presents 73 photomicrographs of serial sections from the brain of common marmosets. Taken at 0.5 mm intervals, the sections are stained for both cells and nerve fibers and shown on facing pages for comparison. Stereotaxic coordinates are labelled in detail and methods for their standardization discussed.

The accuracy of the stereotaxic descriptions provided here will greatly aid researchers using marmoset brains for neurophysiologic, neuroanatomic, neurochemical and behavioral investigations.

Tissue Growth Factors

Editor: R. Baserga
With contributions by numerous experts

1981. 47 figures. XXII, 630 pages
(Handbook of Experimental Pharmacology, Volume 57)
Cloth DM 340,-; approx. US \$ 151.00
ISBN 3-540-10623-5

Contents: Introduction to Cell Growth: Growth in Size and DNA Replication. - Survival and Growth Requirements of Nontransformed Cells. - Epidermal Growth Factor. - The Platelet-Derived Growth Factor. - Somatomedin: Physiological Control and Effects on Cell Proliferation. - Glucocorticoid Modulation of Cell Proliferation. - Protease as Growth Factors. - Nerve Growth Factor. - The Role of Cold Insoluble Globulin (Plasma Fibronectin) in Cell Adhesion in Vitro. - Membrane-Derived Inhibitory Factors. - Diffusible Factors in Tissues Cultures. - Hemopoietic Colony Stimulating Factors. - Inhibition of Hematopoietic Cell Proliferation. - Inducers and Inhibitors of Leukemic Cell Differentiation in Culture. - Angiogenesis Factor(s). - Growth of Human Tumors in Culture. - The Chalmers. - Author Index. - Subject Index.

The fundamental intracellular and environmental factors that control proliferation and differentiation in mammalian cells are examined in this volume. The authors of the articles, all leading workers in the field, provide a broad survey of the present state-of-the-art in this rapidly expanding field. They take into consideration both stimulatory and inhibitory factors, and interdigitate our knowledge of growth factors identified in tissue cultures with those effective in the animal as a whole.

The Pineal Organ

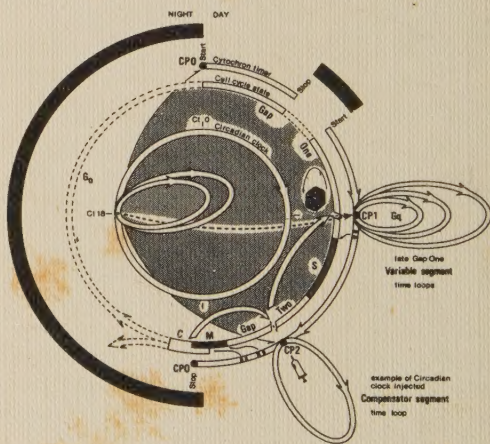

Contents: General Introduction. – The Mammalian Epiphysis Cerebri. – The Non-Mammalian Epiphysis Cerebri: Introductory Remarks. – The Pineal Complex in Lampreys and Fishes. – The Pineal Complex in Amphibians. – The Pineal Complex in Reptiles. – The Avian Pineal Organ. – Epilogue. – References. – Appendix to References: Review Articles Not Mentioned in the Text. – Author Index. – Subject Index.

Complete coverage of an exciting field

International Cell Biology 1980-1981

Editor: H.G. Schweiger

Contents: Opening Lecture. - Genomes and Gene Expression. - Cytoskeleton. - Pathology and Pathogenicity. - Differentiation and Development. - Membranes and Cell Surfaces. - Functional Organization. - Subject Index.

The authors of the contributions were selected as speakers for the Congress for their leading role in their respective fields. The topics cover a uniquely broad range of research areas, providing an excellent reflection of the present status of cell biology. This book will remain a useful source of information to biologists, medical researchers and biochemists, for years to come.
